Delve into ABAP Cloud on SAP BTP ABAP environment – AD181v

Carine Tchoutouo Djomo, Merve Temel – SAP SE
November 3, 2023

Agenda

INTRODUCTION

TODAY'S SCENARIO – **OVERVIEW**

TODAY'S SCENARIO – **EXERCISES**

WRAP UP

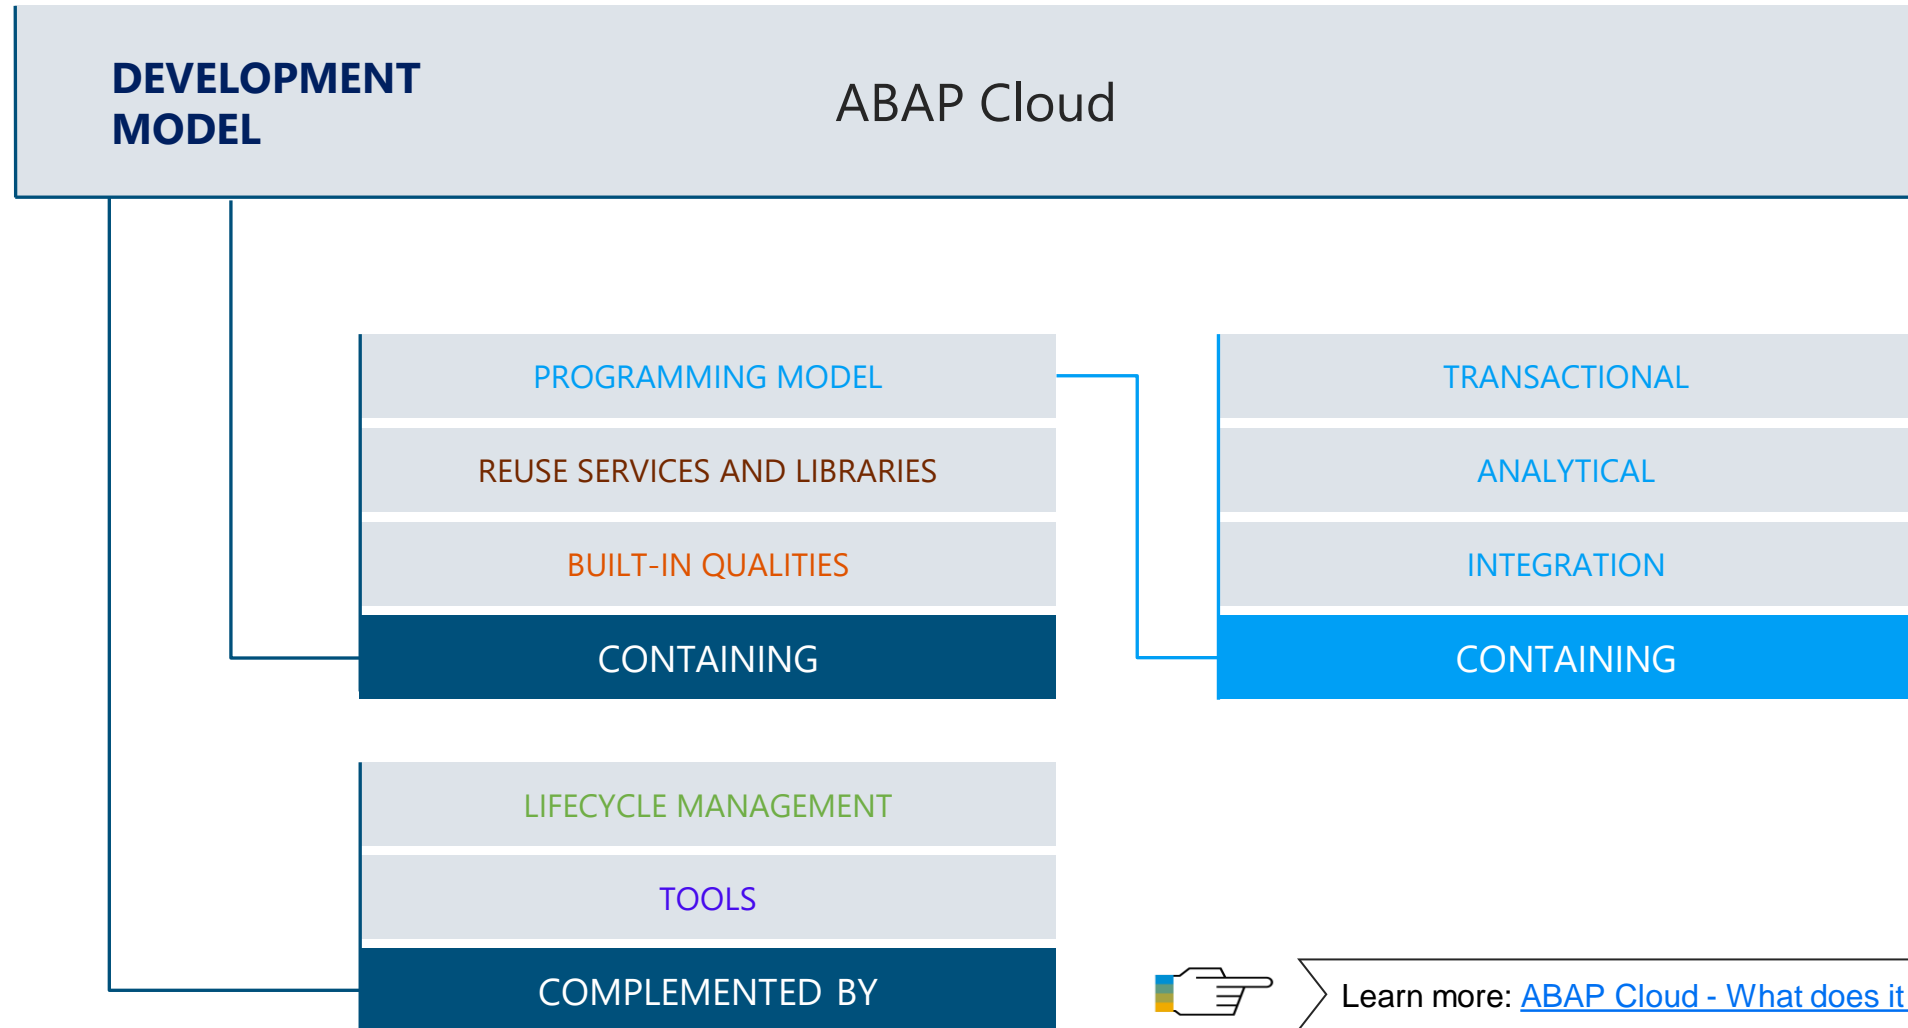

INTRODUCTION

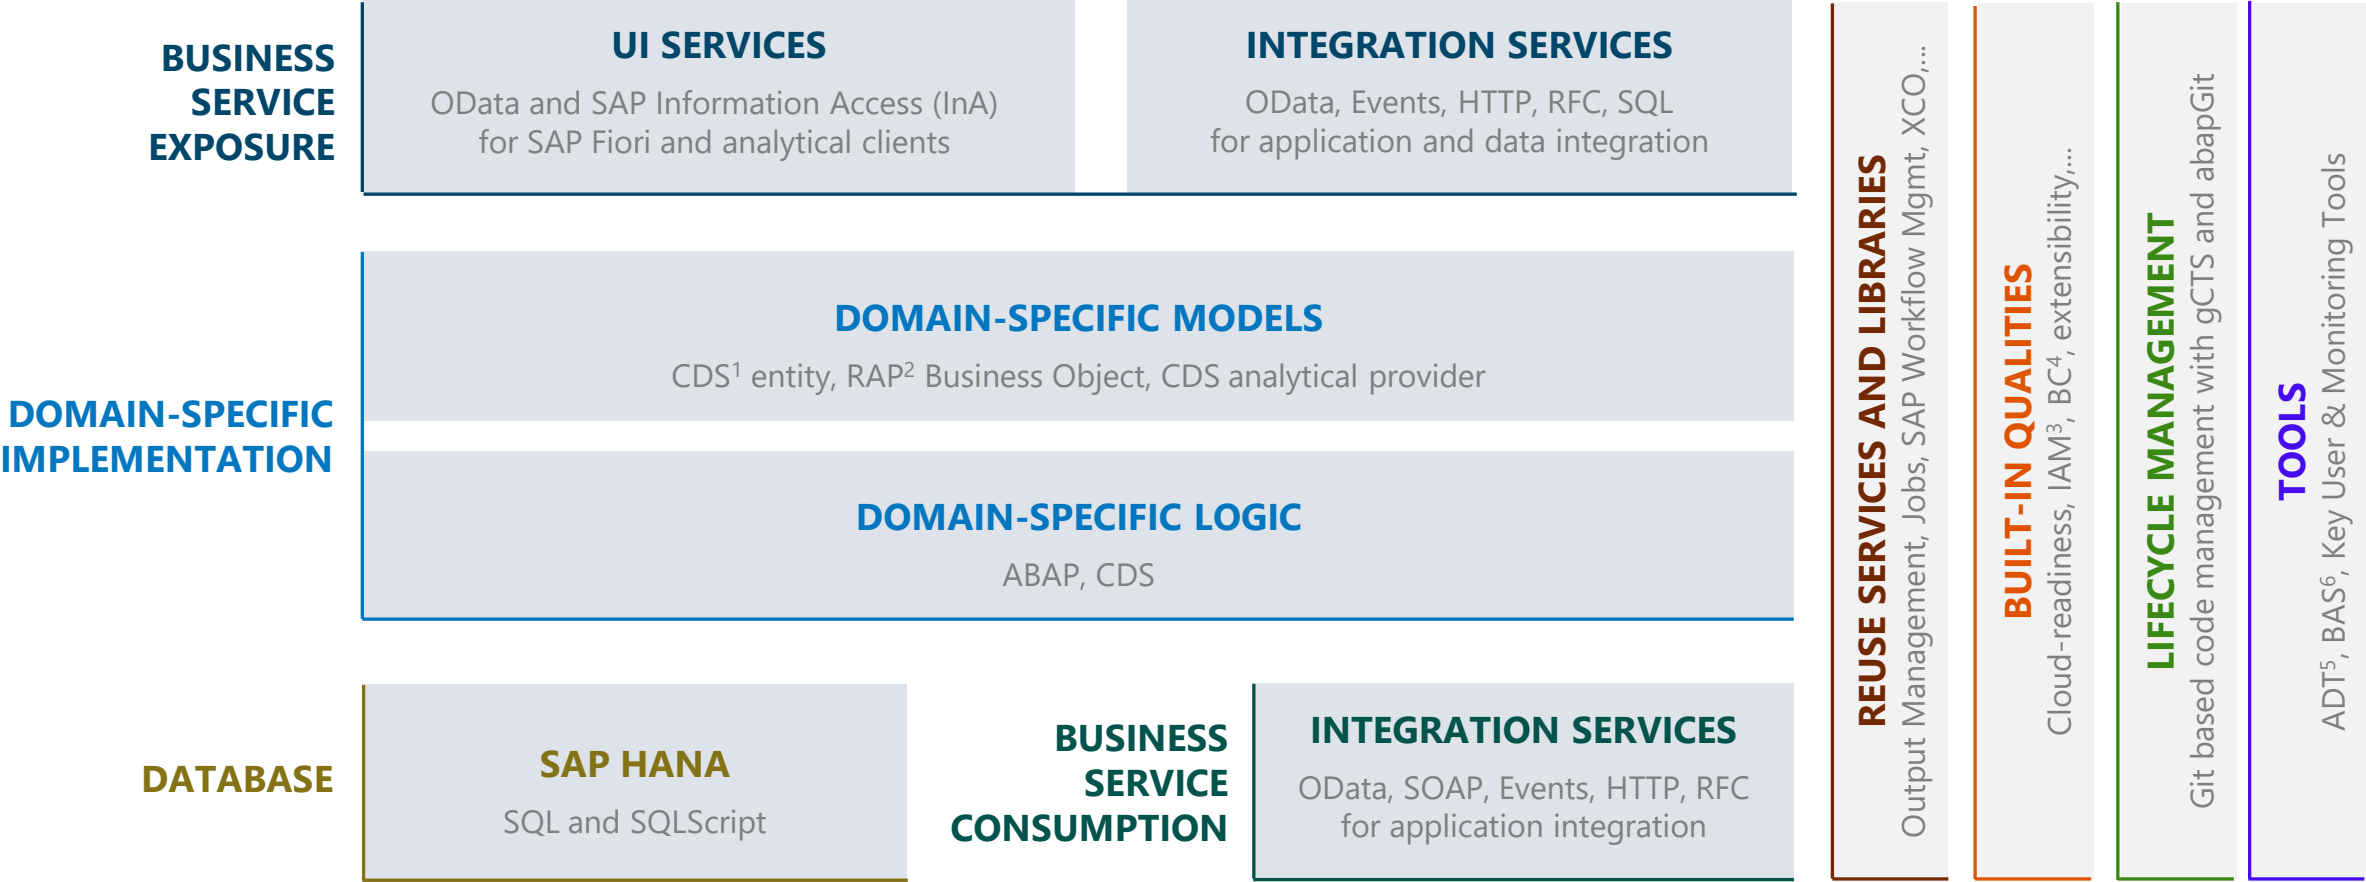

ABAP Cloud

- ... is the ABAP **development model** to build cloud-ready business apps, services, and extensions
- ... comes with SAP Business Technology Platform (SAP BTP) and SAP S/4HANA
- ... works with public or private cloud, and even on-premise

ABAP Cloud – What's in it?

TODAY'S SCENARIO – OVERVIEW

Building transactional SAP Fiori apps with RAP

Underlying simplified Flight data model

-  Main business entities in current scenario
-  Secondary business entities in current scenario

A **Travel entity** defines general travel data, such as the agency ID or customer ID, the overall status of the travel booking, and the total price of the travel.

A **Booking entity** comprises general flight and booking data, the customer ID for whom the flight is booked as well as the travel ID to which the booking belongs.

A **Customer entity** provides a detailed description of a flight customer, or passenger, such as the name, the address, and contact data.

An **Agency entity** defines travel agency data, such as the address and contact data.

A **Flight entity** defines the general flight data for each connection.

TODAY'S SCENARIO – EXERCISES

The AD181v hands-on exercises

 Exercises [↗](#)

[^Top of page](#)

Follow these steps to enhance an existing OData UI service developed with RAP for a transactional SAP Fiori elements-based Travel Processing app.

Exercises	Boosters
Getting Started	--
Exercise 1: Inspect your Exercise Package - Generated RAP BO & UI Service	--
Exercise 2: Enhance the Data Model of the Base and Projected BO	--
Exercise 3: Enhance the BO Behavior Definition and Projection	💡
Exercise 4: Implement the Base BO Behavior - Late Numbering	--
Exercise 5: Adjust the UI Semantics in the Metadata Extensions	💡
Exercise 6: Implement the Base BO Behavior - Validations	💡
Exercise 7: Implement the Base BO Behavior - Actions	💡
Exercise 8: Implement the Base BO Behavior - Determinations	--
Exercise 9: Enhance the BO Behavior with Side Effects	--
Exercise 10: Implement the Base BO Behavior - Functions	--
Exercise 11: Enhance the BO Behavior with Business Events	--
Exercise 12: Implement the Base BO Behavior - Dynamic Feature Control	--

BO: Business Object
EML: Entity Manipulation Language
💡 Exercises with *Boosters* offer an accelerated way of doing them.

01

Access to the exercises:

<https://github.com/SAP-samples/teched2023-AD181v>

02

Set up your development environment.

1. [Install and set up your ABAP Development Tools for Eclipse](#)
2. [Onboarding to the SAP BTP ABAP environment Trial](#)

03

Move at your own speed!

► Use the provided 💡 boosters if you are already familiar with a particular topic

04

Feel free to ask questions via GitHub issues!

► Provide screenshots to facilitate the support

The AD181v hands-on exercises – Working on GitHub (1)

Follow the step-by-step instructions provided on [GitHub](#).

Exercise 6: Implement the Base BO Behavior - Validations

Introduction

In the previous exercise, you've enhanced the UI semantics of your *Travel* app by enhancing the metadata extensions (see [Exercise 5](#)).

In the present exercise, you're going to implement back-end validations, `validateCustomer`, `validateAgency`, and `validateDates`, to respectively check if the customer ID and the agency name that is entered by the consumer are valid, and if the begin date is in the future and if the value of the end date is after the begin date. These validations are only performed in the back-end (not on the UI) and are triggered independently of the caller, i.e. Fiori UIs or EML APIs.

Similar validations were already handled in RAP100. Therefore, you will simply adopt the provided source code. We will use the validations for playing around with features such as determine actions and side effects.

Exercises:

- [6.1 - Implement the Validations of the *Travel* BO Entity](#)
- [6.2 - Implement the Validations of the *Booking* BO Entity](#)
- [6.3 - Preview and Test the enhanced Travel App](#)
- [Summary](#)
- [Appendix](#)

Reminder: Do not forget to replace the suffix placeholder `###` with your chosen or assigned group ID in the exercise steps below.

About Validations

► Click to expand!

Exercise 6.1: Implement the Validations of the *Travel* BO Entity

[^Top of page](#)

Enhance the behavior implementation class of the *travel* entity with the business logic for the validation methods `validateCustomer`, `validateAgency`, and `validateDates`.

There are two (2) ways to complete exercise 6.1:

- Option 1: This is the recommended option. Replace the whole content of your behavior implementation class of the *travel* entity `ZRAP110_BP_TRAVELTP_###` with the provided source code document linked below and replace the placeholder `###` with your group ID. Save and activate the changes, then proceed directly with Exercise 6.2.
Source code document: [Behavior Implementation Class ZRAP110_BP_TRAVELTP_###](#)
- Option 2: Carry out the steps described below (6.1) in sequence.

► Click to expand!

Exercise 6.1.1: Implement the Validation `validateCustomer` of the *Travel* BO Entity

Implement the validation `validateCustomer` which checks if the customer ID (`CustomerID`) that is entered by the consumer is valid. An appropriate message should be raised and displayed on the UI for each invalid value.

► Click to expand!

1. In your implementation class of the *travel* entity `ZRAP110_BP_TRAVELTP_###`, replace the current method implementation of `validateCustomer` with following code snippet.

Replace all occurrences of the placeholder `###` with your group ID.

```
METHOD validateCustomer.  
  *read relevant travel instance data  
  READ ENTITIES OF ZRAP110_BP_TRAVELTP_### IN LOCAL MODE  
  ENTITY Travel  
  FIELDS ( CustomerID )  
  WITH CORRESPONDING #( keys )  
  RESULT DATA(travel).
```

The **AD181v** hands-on exercises – Working on GitHub (2)

Use provided booster exercises to speed of the steps of familiar exercises

- 3.1 - How to handle this exercise 
- 3.2 - Define the Late Numbering and the Static Field Control
- 3.3 - Define the Validations
- 3.4 - Define the Actions
- 3.5 - Define the Determinations

Make use of Copy raw contents button to easily copy code snippets

```
@Semantics.largeObject: { mimeType: 'MimeType',    //case-sensitive  
                           fileName: 'FileName',    //case-sensitive  
                           //acceptableMimeTypes: ['image/png', 'image/jpeg'],  
                           contentDispositionPreference: #ATTACHMENT }
```

The AD181v hands-on exercises – Working on GitHub (3)

###

Always replace all occurrences of ### with your assigned suffix in code snippets

ABAP Console

RAP110 exercise generator

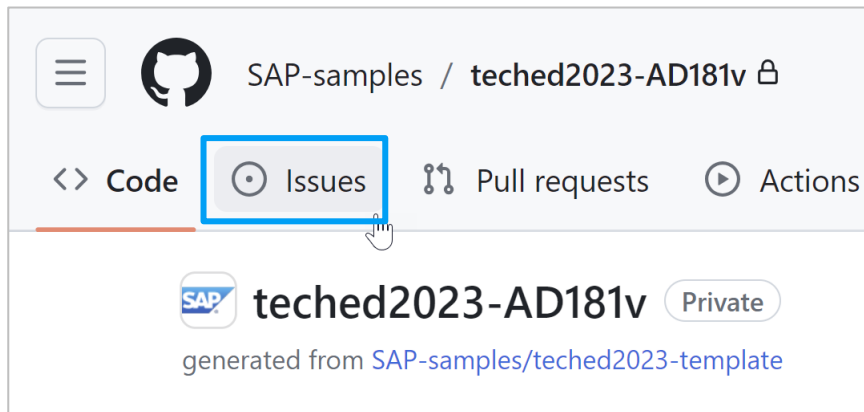

Use transport D23K901012

Info: Suffix "810" will be used.

The following package got created for you and includes everything you need:
In the "Project Explorer" right click on "Favorite Packages" and click on "
Enter "ZRAP110_810" and click OK.

SUMMARY

ABAP Cloud – One development model for SAP S/4HANA and SAP BTP

¹ SAP S/4HANA any premise or SAP S/4HANA Cloud, private edition release \geq 2022

² SAP S/4HANA Cloud, public edition release \geq 2208, 3-system landscape required

Key takeaways

ABAP Cloud is the development model provided to build cloud-ready enterprise services, apps, and extensions on SAP BTP ABAP environment and all editions¹ of SAP S/4HANA, in the cloud and on-premises.

The **ABAP RESTful application programming model** (RAP) is the **centerpiece of ABAP Cloud** for building efficiently **transactional** OData-based services and SAP Fiori apps with built-in cloud qualities.

RAP best support **SAP HANA** and **SAP Fiori elements**.

RAP is available on **SAP BTP ABAP Environment**, **SAP S/4HANA Cloud**, and **SAP S/4HANA** as of edition 1909.

The **RAP feature set** is enhanced **quarterly** in SAP BTP ABAP environment, **twice a year** in SAP S/4HANA Cloud ABAP environment, and **every two years** in SAP S/4HANA.

What's New: [SAP BTP ABAP environment](#) | [SAP S/4HANA](#) | [SAP S/4HANA Cloud](#)

What's Next: [ABAP Platform Roadmap Information](#) for all products

¹ - SAP S/4HANA any premise or SAP S/4HANA Cloud, private edition release ≥ 2022

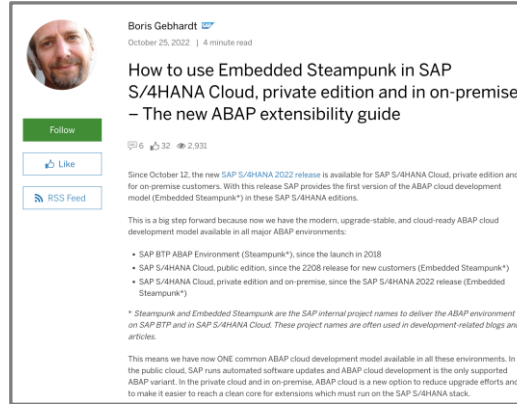

- SAP S/4HANA Cloud, public edition release ≥ 2208, 3-system landscape required
